Figure 1 shows the results of the regression analysis. The dependent variable is the number of days off work due to sickness absence. The independent variables are the age, gender, and education of the respondent. The results show that the number of days off work due to sickness absence increases with age, gender, and education. The coefficient for age is 0.001, for gender is 0.002, and for education is 0.003. The constant term is 0.001.
